General description.

A large portion of this Township is Prairie, and in general the Prairies have slues or swails running through them. There is too little undulation in the surface to make it very valuable for grain. The Prairies are studded with groves of timber and covered with a kind of blue grass.

The largest portion of this Township is 2^d rate land. The timber heavy, tall and fine. The soil is generally from 6 to 8 inches deep. The Undergrowth in the Prairies and Barrens is generally burned off. In the thick timber it is chiefly Spice, Oak, Hazel, Sassafras & Green briars. Granite rocks are found in many places.

The margins of the Ponds, Creeks & Swamps cannot be well defined, owing, I presume, to the flatness of the country.

I hereby certify, that in pursuance of a contract with Robert T. Lytle, Surveyor General of the United States, for the States of Ohio, Indiana and Michigan, bearing date the 10th day of May 1838, and in strict conformity to the laws of the United States and the Instructions of said Surveyor General, I have surveyed and subdivided into sections fractional Township N. 21 North, in Range N. 2 East of the 2^d Principal Meridian in the State of Indiana; and I do further certify, that the foregoing are the true and original field notes of said survey and subdivision, executed as aforesaid.

Certified this 13th day of June 1838
